

The easy way  
to security  
and simplicity

**BUSINESS SUITE**

**F-Secure** 

# Choose data security **the easy way**

Choosing the right business IT security is often a difficult task that requires going through endless options. F-Secure Business Suite takes the opposite approach: all essential components are included in one solution that can be flexibly scaled to fit companies of all sizes.

Business Suite offers proactive protection which prevents users from ever coming into contact with hostile content so that your data security not compromised. F-Secure Business Suite offers complete protection for the network, easy license management and less time required for administration.

## Comprehensive protection for all IT assets

F-Secure Business Suite components are optimized to be light for minimal impact on system performance. Using and updating are designed to be as simple as possible, while meeting even the complex requirements of large and small companies.

Business Suite comes with all the latest features including reliable end-point protection for all levels of the corporate IT infrastructure: Desktops, laptops, servers, and e-mail and web traffic. The solution is simple to install and use. F-Secure Policy Manager, our efficient central management tool, is part of the Business Suite package.

# Great value for investment

Thanks to latest in-the-cloud technologies, real-time security updates are available globally within 60 seconds of a confirmed new threat. Automatic daily virus, spam and spyware updates with minimal bandwidth use ensure up-to-date protection. To ensure fast reaction times against new and emerging threats, F-Secure Security Lab works 24/7 to study the threat landscape.

# 60

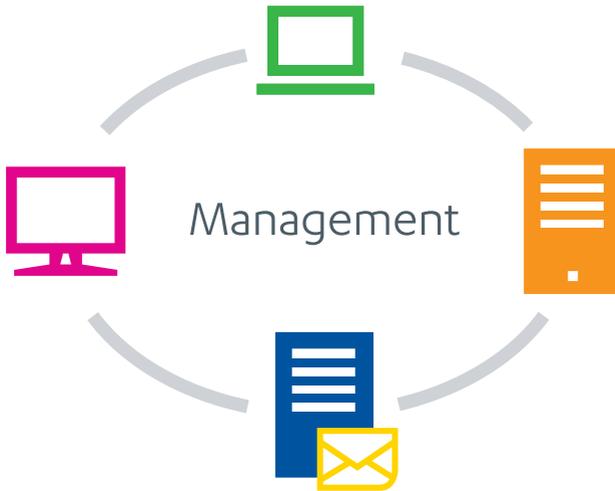

seconds from  
a threat to  
real-time updates

# Forerunner in data security

F-Secure Business Suite includes award-winning components ensuring protection for your business you can rely on. F-Secure has been in the industry for more than 20 years and has been showing the way with several innovative industry firsts, like real-time scanning, centralized management, rootkit detection, mobile security, security as a service, in-the-cloud real-time protection network, and protection against web exploits.

Modern malware can break into computers even if there are up-to-date security components installed. F-Secure is the first antivirus vendor in the world to release a real-time protection network that enables global protection within seconds from the first confirmation of a new threat. This is based on F-Secure DeepGuard, a technology that uses “in-the-cloud” computing to provide instant protection against new threats.

# Protection for **all your assets**

Business Suite protects the whole environment and offers a central management tool. This all makes IT security simple.

## **Two versions** to suit your security requirements

**Business Suite Standard** offers you all the above mentioned benefits and features.

**Business Suite Premium** comes with Software Updater that offers an additional layer of protection by keeping your operating system and 3rd party applications up to date and patched from vulnerabilities.

# Business Suite elements

Business Suite protects the whole environment and offers a central management tool. This all makes IT security simple.
