

## F-SECURE E-MAIL AND SERVER SECURITY

Save money and trouble  
– safeguard your servers and e-mail

**Powerful real-time protection for email and file servers against the constantly evolving security threats, ensuring that infected computers don't spread viruses across the network.**

### Today's challenges

Fighting malware in a corporate network can be costly and time-consuming due to network disruptions, decreased productivity, corrupted data, and the leaking of confidential data. Even a company's reputation can be in danger if it unwittingly spreads viruses to its business associates. It is essential to keep e-mail and file servers safe, as they are the first line of defense against online threats like spam and malware. The use of servers as terminal servers with access to internet brings more challenges to IT-security.

### The solution

F-Secure E-mail and Server Security protects the most important elements of a company network, email and file servers. With everything combined in one package, the solution is easy to install and maintain. F-Secure takes server protection to a new level with the fast, efficient and simple solution. The solution can be centrally installed, configured and managed through F-Secure Policy Manager. F-Secure E-mail and Server Security protects Windows, Citrix and Microsoft Exchange servers. F-Secure Server Security is designed for file servers. Linux servers can be protected with F-Secure Linux Security.

### Improved email and server protection

F-Secure E-Mail and Server Security 10 offers enhanced security with the new DeepGuard detection technology, which has a proven detection track record from independent 3rd party testing organizations. This ensures a state-of-the-art proactive protection to all platforms.. Browsing Protection shows which websites are safe and blocks harmful sites.

### Centralized management, reporting and alerting

The software can be remotely installed, configured and monitored from one central location.

### Key features

Real-time protection against viruses, spyware and riskware

Browsing Protection with web site reputation rating

Protection against unknown threats (F-Secure DeepGuard)

Excluding trusted processes from real-time scanning

Manual scanning for viruses, spyware, riskware and rootkits.

Scheduled scanning

Automatic signature updates (Internet connection required)

Central management from a single console or a new web based interface for local and remote management

## E-mail and Server Security

Combined Windows and Microsoft Exchange malware protection including spam control. Managed with a single web-based user interface or with F-Secure Policy Manager. Includes enhanced cloud-based protection with DeepGuard, Browsing Protection for terminal users and centralized quarantine management.

Supports the following servers:

- Windows Server operating systems
- Windows Terminal Servers
- Microsoft Exchange Servers
- Citrix Servers

## Server Security

Includes award-winning F-Secure technologies to protect file servers against malware without slowing down the systems.

## Linux Security

The solution includes integrated anti-virus, anti-spyware, firewall, integrity checker, protection against rootkits, as well as comprehensive support for all major Linux distributions. It also supports the scanning of messaging content in an established system that uses third party solutions.

## Policy Manager

The F-Secure Policy Manager centralized management system automatically notifies administrators of any security incidents or virus activity. Administrators can easily change and enforce security policies.
